Amendments to the Claims

Claims 1-11. (Cancelled.)

12. (Previously Presented) A fuel cell comprising:

an electrolyte membrane comprising a membrane support structure comprising bacterial cellulose;

an anode disposed on one side of the electrolyte membrane; and a cathode disposed on an opposite side of the electrolyte membrane,

wherein at least one of the anode and the cathode comprises an electrode support structure comprising bacterial cellulose, and a metal catalyst disposed in or on the electrode support structure, the metal catalyst being disposed in or on the electrode support structure by placing the electrode support structure in a solution of a metal salt for a sufficient time period such that the metal salt is reduced to metallic form and the metal catalyst precipitates in or on the electrode support structure.

- 13. (Original) The fuel cell of claim 12 wherein: the catalyst is selected from platinum group metals.
- 14. (Original) The fuel cell of claim 12 wherein:the catalyst is palladium.

- 15. (Currently Amended) The fuel cell of claim 12 wherein: a metal salt <u>is</u> disposed in or on the membrane support structure.
- 16. (Previously Presented) The fuel cell of claim 12 wherein: a sulfonated polymer is disposed in or on the membrane support structure.

Claims 17-20. (Cancelled.)

- 21. (Previously Presented) The fuel cell of claim 12 wherein:

 the electrode support structure is dehydrated after the metal catalyst is disposed in or on the electrode support structure.
 - 22. (Previously Presented) The fuel cell of claim 12 wherein: the membrane support structure is dehydrated.
- 23. (Previously Presented) The fuel cell of claim 12 wherein:
 the anode and the cathode comprise an electrode support structure comprising
 bacterial cellulose, and a catalyst disposed in or on the electrode support structure.
- 24. (Previously Presented) The fuel cell of claim 12 wherein:
 the metal salt is a coordination compound including a platinum metal group
 complex ion.
